

MANUFACTURING OF: - LT PANEL / ALL CANTOL PANEL / EV CHARGING

S&S GROUP

CE MARKING CERTIFIED COMPANY

Reg. Office:- A-51 , Sector-05, Noida UP- 201301

S&S GROUP. was founded in 2017. The company is working from 2017 and is providing quality products to Our customers. From the beginning we value Our customers need and provide them best quality products. Our customer list show cases a wide variety of satisfied customers.

We are One Of the leaders in the Field Of HV, LV Switch board, Automation & Protection Systems in India. We are in this field from 2017. The Best knowledge and experience gathered during these years has made it possible to generate strong customer base in different industries.

S&S GROUP has carried Out Designing, Detailed Engineering, Supply, Fabrication, Etraction, Installation, Testing and Commissioning of the L.V. Switch boards, Automation & Protection & EV CH Systems as per norms Of Indian & International Standards.

Carving a niche in the domestic markets, the company has acquired huge credibility. It is engaged in the business of manufacturing, supplying, and exporting genuine-grade Electrical Panels, Bus Ducts, EV swap stations and Substations. The company is also praised for offering professional turnkey solutions for power panels. With quality products and prompt services, the company has earned great appreciation from customers based in India

With quality Panels, Bus Ducts, Generator Sets, and prompt services, the company is maintaining a huge clientele across the globe. Along with a strong foothold in the Indian market, the company is gaining accolades for delivering reliable electrical solutions. The company is also making efforts to further expand its business network in new markets.

OUR VISION

- To be leader in its chosen field
- To ensure Profitable Growth
- To meet or exceed customer expectation
- To be socially responsible

OUR MISSION

Our Mission

Our mission is to be the best in the league by continuing to manufacture quality products with complete commitment to our customers. Our aim is to be innovative and provide solutions for our customers to become a benchmark in the market.

Principle of Working

- Understanding and fulfilling our customer requirements
- Understanding and responding to customer feedback
- Ensuring consistent product quality
- Respecting individuals
- Enhancing employee competency through training and appraisals
- Continuous improvement in our product quality and management

SILENT FEATURES

- Panels are manufactured with the latest CNC machines and a powder-coating plant as per international standards.
- Fully bolted construction design allows easy modifications at the site.
- Zinc-passivated plates are used for mounting switchgears, making the panel aesthetically superior and providing a long-lasting surface finish.
- Panels are available with aluminium and copper busbars.
- Panels are type-tested at CPRI.
- Latest design as per international standards, ensuring proper functionality, colours, and shapes.
- Specially designed hinges allow the door to open up to 180 degrees.
- Special design allows easy access to the busbar for maintenance purposes.
- Shutter-type safety system for vertical busbar chambers.
- Main busbar and control busbar are completely segregated from each other.

STORNG MANAGEMENT

- Our strong management team has proven execution capabilities globally. Our senior leadership team and Board of Directors include widely recognized experts in solar energy, energy finance, and public policy, with track records of building successful businesses.
- Our Strength
- Technical competence
- Efficient project management
- Strict adherence to delivery schedules
- Competitiveness
- Commitment to customer satisfaction

QUALITY

Our engineered products are tested on specific parameters at every stage of processing to ensure they meet the qualitative requirements of our clients. Various quality procedures are carried out on critical parameters of the products to deliver the best quality. These procedures are regularly updated and revised to further enhance product quality. We have a dedicated team of quality analysts engaged in implementing different quality measures in our well-organized laboratories.

CONSTRUCTION

The quality of our electrical products is our top priority. Each product undergoes strict testing and inspection at every stage of production to ensure the highest standards for our clients. Various quality procedures are implemented according to critical technical and safety parameters. Our dedicated quality team conducts thorough checks in well-equipped laboratories using the latest instruments. All processes and tests are regularly updated to continuously enhance product quality. Through these committed efforts, we are able to deliver reliable, durable, and high-performance electrical products that meet and exceed customer expectations.

LAYOUT

The front side of the panel houses meters, switches, and other active devices. In the case of control and relay panels, the relays are also mounted on the front side. The front side of the panel and its internal layout are designed to meet ergonomic and aesthetic requirements. Adequate space is provided for cabling, operation, and testing. The front side of the panel can include mimic diagrams, such as painted mimics with colour coding for voltages in line with standards or customer requirements. These can be equipped with indicating lights, control switches, and other features for the active display of system conditions.

WIRING

Wiring is done using 1100-volt grade multi-stranded PVC wires. These wires are neatly bundled together with PVC cable ties for ease of installation and maintenance. At both ends, the wiring is supported with self-locking ferrules and terminal strips to simplify cable termination. The panel is also equipped with an internal illumination lamp, controlled by a toggle or door switch, to facilitate maintenance work.

QUALITY ASSURANCE

Rigorous quality checks and tests are done at various stages of manufacturing. On the completely assembled panel, routine tests. This is our key policy that we follow towards maintaining excellence in quality standards. We administer stringent quality standards at every level of our production and service support. The three wholesome quality assurance steps that we rely upon

- We provide safety helmets, safety belts, hand gloves, and boots to all our workmen and officers at the site. Safety signs and specific site safety rules must be strictly
- followed. Ladders or scaffolding, as per site requirements, are provided for working
- at heights. First aid boxes and fire extinguishers are installed at strategic points on
- the site. All our workmen are covered under ESIC and EPF. Danger notice boards
- are fixed at all important locations. To ensure compliance with all safety measures,
- we appoint a dedicated Safety Supervisor at the site.

SERVICES

We are committed to providing quality products and systems to the end user in the field of L.T. Systems through teamwork, and we continuously strive for improvement in the design, engineering, and installation of equipment to achieve customer satisfaction. The respective department heads ensure verification of records for products, materials, and raw materials from suppliers, manufacturers, and sub-vendors to maintain quality at every stage.

ELECTRICAL CONTRACTORS SERVICES

Our organization is engaged in undertaking engineering, supplying, testing, and commissioning of electrical power, distribution, and control equipment, as well as execution of projects on a turnkey basis.

Backed by an efficient workforce and available resources, we are capable of designing, installing, and commissioning various substations, switchgear, cabling, distribution panels, plant cabling, and earthing systems effectively.

We offer turnkey solutions for the following:

- One Purchase Order
- One Supplier
- One Solution

ELECTRICAL CONSULTANTS

We also provide turnkey solutions for the design of substations and selection of equipment for our clients. Furthermore, we offer site services, including installation, testing, and commissioning of the systems, as well as operation and maintenance of the systems supplied and commissioned by us.

DESIGNING

Designing starts with understanding the customer's requirements. Based on the review and inputs, the design department prepares drawings, BOQ, specifications, inspection details, etc. Once the design and specifications are finalized, the procurement of bought-out materials shall commence. This includes the evaluation of vendors/subcontractors, followed by the inspection of the bought-out materials to ensure compliance with quality standards.

MANUFACTURING

After approved design, working drawing are provided to the engineers to manufacture the sheet steel cubicles/panels. Thereafter assembly and hiring Of components are under taken according to approved circuit diagrams. Quality copper busbars are installed from imported electrolytic copper. After customer's/ consultant's testing and approval the switchgear is ready for delivery.

INSPECTION

Guidelines for handling, storage, and packing shall be obtained from the manufacturer or other competent authority. Wherever necessary, assistance from outside testing laboratories will be sought to support this activity. Agreed quality/inspection records can be made available for evaluation by the purchaser or their representative. Project-related training needs shall be assessed, and necessary training will be provided at the appropriate stage. When required, the company shall undertake servicing or annual maintenance contracts.

INSTALLATION

Installation:

If required by the customer, we carry out expert installation or provide installation supervision.

Maintenance:

At the customer's request, we perform expert troubleshooting.

Repairing:

We also provide repairing services for existing panels.

Annual Maintenance Contract (AMC) Services:

We offer annual maintenance services for existing panels.
